

## **Make your production wastewater free: H2O Kunshan at the IE Expo Shanghai**

Water is one of the most costly resources on earth. Especially in China, the issue of “clean water” is becoming increasingly significant due to the massive contamination of China’s waters. H2O Kunshan provides a solution that allows industrial enterprises to comply with the Chinese government’s more stringent limits: optimum wastewater treatment using the VACUDEST vacuum distillation systems. These innovative facilities are being presented at the IE Expo in Shanghai, which takes place between 15 and 17 April.

The Chinese government is actively combatting water pollution in China. The resulting strict limits require high-quality wastewater treatment. VACUDEST vacuum distillation systems offer the ideal solution here. Contaminated industrial wastewater is treated so effectively it can be reused in production. No wastewater means no water pollution!

Innovative technologies, developed by German parent company H2O GmbH, ensure exceptionally high treatment quality in a single step. The treated water is almost entirely free from oil and has a constant, stable pH value, so it meets even the highest requirements for use as rinse water.

H2O Kunshan will be explaining exactly how this works at the IE Expo, Asia’s leading trade fair for environmental technology. This year sees the 20<sup>th</sup> edition of the expo, which will be taking place from 15 to 17 April 2019. Attendees who want to find out more about zero liquid discharge production with VACUDEST vacuum distillation systems will have an opportunity to do so at Stand B29 in hall E3.

Those who are interested can also find further information on the company’s innovative technology at the homepage [www.h2o-cn.cn](http://www.h2o-cn.cn).

**About H2O** – The leaders in zero liquid discharge at H2O are global technology leaders in efficient and safe evaporators for treating and recycling industrial wastewater. Systems are individually tailored to customer requirements thanks to modular technology. More than 30 years of experience ensures extraordinary products that set technological standards.

Parent company H2O GmbH is headquartered in Germany and supplies over 100 systems a year to the entire world according to the motto ‘German Engineering’. The H2O Kunshan subsidiary was established in 2015. 13 sales and laboratory employees support the ever-increasing number of Chinese customers.
