

**Better rinse water quality: H2O GmbH at the imh Annual Powder Coating Forum
[Jahresforum Pulverbeschichtung]**

Save money while simultaneously improving the finish quality – H2O GmbH will be demonstrating how this is possible at the imh Annual Powder Coating Forum on 13th and 14th March in Vienna.

The annual forum will focus on the challenge of realising potential savings without losing sight of the finish quality. Following the theme of “Practical experience for practical application”, the different forum presentations will offer an insight into a range of technical problems and provide innovative development solutions.

One of the participants will be Thomas Nadler, expert for zero liquid discharge production at H2O GmbH. He will be using the practical example of umdasch Store Makers GmbH to illustrate how efficient rinse water treatment with VACUDEST vacuum distillation systems can cut costs in pre-coating treatment while also improving the quality of the finish.

If you are interested you can register at the homepage from imh.

About H2O GmbH – H2O GmbH nowadays forms part of the worldwide most experienced experts in the sustainable treatment and recirculation of industrial wastewater. With its efficient and safe VACUDEST vacuum distillation systems they achieve wastewater-free production for customers in more than 50 countries throughout the world.

Since the spin-off from Mannesmann Demag in 1999 H2O has, as an owner-operated company, been able to gain a growing number of loyal customers. More than 100 employees contribute to achieving this high customer satisfaction level from the headquarters in Steinen in south Germany and in the subsidiaries in Switzerland, Poland and China.
